

# BASIN PREPARATION

- 1 Take the basin out of its packaging and place its support legs upwards.
- 2 Firmly press the blue button on each side before unfolding the legs.
- 3 Firmly pull on each leg even if the system offers some resistance.
- 4 Place the support legs downwards before pushing the bottom of the basin to the floor to stretch the accordion.
- 5 Place the entire basin inside a protective bag (NaturSac 27" x 32" roll).
- 6 Place the green advertising inscription of the bag under the basin for aesthetic purposes.
- 7 Tear through the useless and external part of the bag with the tip of the 4 legs.
- 8 This should allow the bag to completely cover the inside of the basin down to the bottom.
- 9 Fill approximately half of the basin with lukewarm to warm water based on your tolerance.
